

General Description

GRM-5550DR-UB8X4P500 is consist of the Swiss ublox M8 series GNSS chip, and six axis acceleration sensor. It is a multiple function communication module which has integrated the advanced online adaptive integrated navigation algorithm and GNSS location engine, it can provide real-time,high-precision vehicle location, speed measurement and direction measurement information in any environment (such as indoor, tunnel, underground garage, etc). When the signal accuracy is reduced and even satellite signals are lost in GNSS system, without using the odometer information, GRM-5550DR-UB8X4P500 Can use only inertial navigation technology to locate, measure the vehicle carrier accurately for a long time.

GRM-5550DR-UB8X4P500 is a concurrent receiver module with built-in multiple positioning systems that support simultaneous reception of GPS, GLONASS, Galileo, Beidou, and QZSS L1 bands. It has 33 tracking channels, 72 capture channels and 210 PRN channels, enable it to capture and track any multiple satellite signals. Compared with single GPS system, the multiple positioning system (GPS&GLONASS& Galileo, Beidou &QZSS) of GRM-5550DR-UB8X4P500 makes a great increase in the number of visible and available satellites, at the same time, the first positioning time is greatly reduced, even in complex urban environment, it can achieve higher positioning precision and accuracy.

Applications

- Vehicle High Precision Navigation
- ITS (Intelligent Traffic System)
- Vehicle Remote Monitoring

Figure: GRM-5550DR-UB8X4P500

Features

- Build on high performance,low-power GNSS U-blox UBX-M8030-KT chip set
- Support satellite systems: GPS, Glonass Galileo, Beidou
- Ultra high track sensitivity: -167dBm
- Baud rate:115200
- Protocol compliant NMEA-0183, UBX, RTCM2.3
- The built-in six-axis acceleration sensor can be used to define various gravity algorithms
- Automatically inertial navigation positioning without GNSS signal
- Built-in high gain LNA to improve receiving sensitivity
- Automatically save GNSS log information
- Operating voltage: 3.0V~5.5V
- Power consumption: 140mA~150mA
- Operating temperature range: -40to85°C
- Patch Antenna Size:35x35x4mm
- Small form factor: 55x50x18.4mm
- Communication type: RS232
- Wire interface type: Molex 4PIN , L=500CM
- Waterproofing grade: IP41
- RoHS compliant (Lead-free)

1. Performance Description

1.1 Features

| item | Features | item | Features |
|----------------------------|--|--------------------------|--|
| Gyroscopic drift | High precision attitude heading information is obtained by eliminating gyro drifttwo | Component selection | High performance three axis gyroscope and three axis accelerometer |
| Acceleration noise | Eliminate vibration acceleration and obtain high accurate velocity information | Error compensation | Complete quadrature error / temperature drift and other error compensation |
| zero-velocity correct | Zero speed correction algorithm prevents navigation data drift | Preventing pirate | Each product calibration code is inconsistent for preventing pirate |
| Software algorithm | Adaptive extended Calman filtering algorithm | Physical Dimensions | Compact modular design saves user product space |
| Intelligent identification | Identify and isolate GNSS data with large errors | Communication protocol | Plug and use standard communication protocol NEMA-0183 |
| Independent to odometer | High precision positioning by using inertial navigation | Engineering installation | No installation angle, convenient for users to install on board |
| Navigation technology | Switch between integrated navigation and inertial navigation technology | Sub - meter | Support RTCM2.3 protocol / sub-meter level navigation in complex environment |

2.Application

2.1 Block Diagram

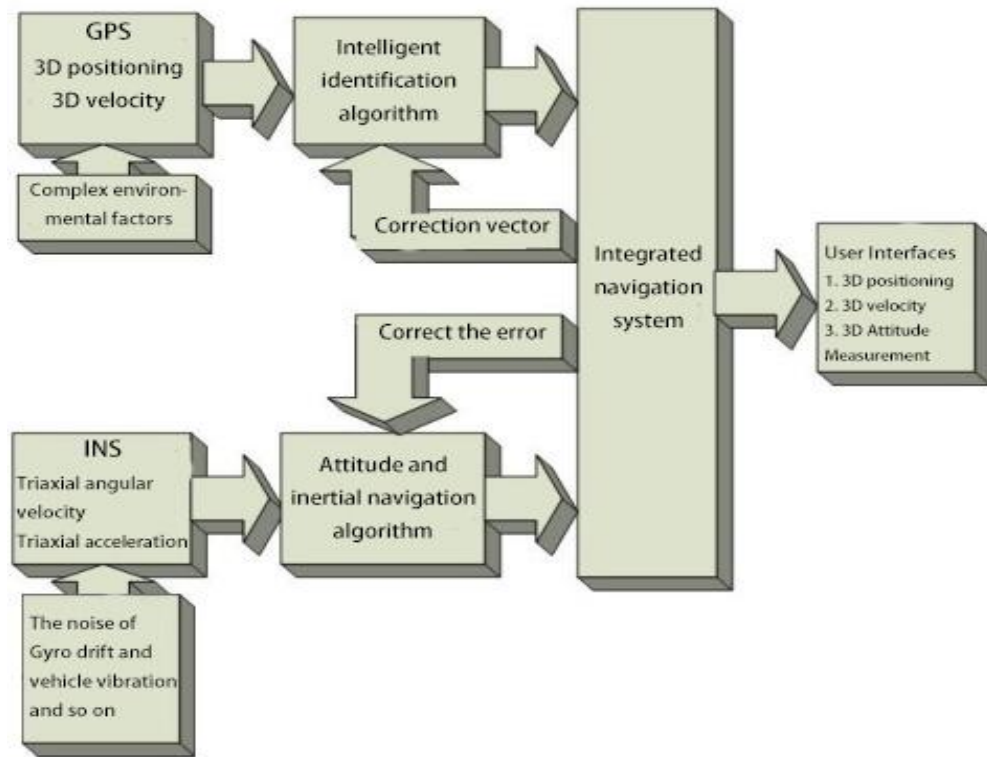

Figure 1: Block Diagram

2.2 System Introduction

2.2.1 Satellite navigation system:

Satellite navigation system has the advantages of global application, all-weather extension and high precision navigation; But satellite navigation systems are vulnerable to environmental influences, such as trees, buildings and so on, resulting in multi path effect to cause the accuracy of positioning result reduced or even lost, especially in the indoor environment, such as tunnels, satellite navigation system cannot be used.

In addition, even in an open environment, when the carrier speed is very low, the satellite navigation system will also be unable to get precise carrier azimuth information (heading angle).

2.2.2 Inertial navigation system:

The inertial navigation is based on Newton's laws of mechanics to conduct integrating to time and change it into navigation coordinates by measuring the acceleration of the carrier in the inertial reference frame, thus, it can get information about speed, yaw angle, and position in navigation coordinates, as well as the carrier information. However, due to the serious drift of gyro and the shock of vehicle, the inertial navigation system can not obtain high precise azimuth and velocity information by directly integrating acceleration, that means, existing micro inertial navigation systems are difficult to work independently for a long time.

2.2.3 Integrated navigation system:

Satellite / inertial integrated navigation takes full advantage of inertial navigation to obtain optimal navigation results based on the integration of optimal estimation algorithm and the Kalman filtering algorithm ; Especially when the satellite navigation system cannot work, the inertial navigation system is used to make the navigation system continue to work, to ensure the normal operation of the navigation system, and to improve the stability and reliability of the system.

2.2.4 Independent to odometer

Conventional vehicle navigation systems often rely on GRM-5550DR-UB8X4P500 schemes of odometer and gyroscopes to realize high precision navigation and positioning in complex environment of vehicle, for many automotive aftermarket, the connection of odometer signal is extreme complex, and it involves auto safety. After years of research and development, when the signal accuracy in GNSS system is reduced and even satellite signals are lost, only by using inertial navigation technology, the vehicle carrier can be accurately positioned, measured in a long time. Compared with the existing products on the market, the performance has been greatly improved.

Of course, the GRM-5550DR-UB8X4P500 system can also connect with odometer signals and will achieve better performance indicators.

2.2.5 Vehicle attitude angle

GRM-5550DR-UB8X4P500 navigation system achieves filtering of gyro drift and acceleration vibration signals using research experience in MEMS inertial devices for many years by adaptive filtering algorithm, and furthermore, it can get high precision attitude information, so as to meet various needs of vehicle monitoring and navigation applications in ramp detection.

2.2.6 GGM navigation system

GRM-5550DR-UB8X4P500 navigation system provides intelligent recognition algorithm for satellite navigation accuracy to identify the positioning accuracy of satellite navigation based on the high precision navigation information provided by integrated navigation, if the satellite navigation accuracy is better, integrated navigation will be carried out, once satellite navigation signals are found to be very bad and even lost, inertial navigation is carried out, in a word, GRM-5550DR-UB8X4P500 navigation system realizes autonomous switching between integrated navigation and inertial navigation.

2.3 Product feature

2.3.1 Maximum parameter

| Parameter | Index | Unit |
|-------------------|--------------|------|
| Power Supply | | |
| Voltage Supply | 5.0 | V |
| Temperature Range | | |
| Operation Temp | -30 to + 85 | °C |
| Storage Temp | -40 to + 125 | °C |

2.3.2 Electrical feature

| Parameter | Index | Unit |
|--|------------------|------|
| Power Supply | | |
| Input voltage | 3.3-5.0 | V |
| Current | 55 ¹⁾ | mA |
| Consumption | 300 | mW |
| Time | | |
| The time required for the first valid data | <30 | S |

2.4 Performance Index

2.4.1 Mileage timing

| GNSS signal loss time | Receiver positioning mode | Horizontal position ¹ | Horizontal velocity ¹ | Pitch roll Angle | Heading angle ¹ |
|-----------------------|---------------------------|----------------------------------|----------------------------------|------------------|----------------------------|
| 5 s | Standard | 1.0-2.0m | 0.05m/s | 0.3deg | 1.0 |
| | Standard | 1.5-5.5m | N/A | N/A | N/A |
| | Standard | 3.0m | N/A | N/A | N/A |
| | Standard | 5.0m | 0.30m/s | 0.4deg | 1.0deg |

2.4.2 No Mileage Timing

| GNSS signal loss time | Receiver positioning mode | Horizontal position ¹ | Horizontal velocity ¹ | Pitch roll Angle | Heading angle ¹ |
|-----------------------|---------------------------|----------------------------------|----------------------------------|------------------|----------------------------|
| 5 S | Standard | 2.0-3.5m | 0.05m/s | 0.5deg | 1.0 |
| 10 S | Standard | 10.0m | N/A | N/A | N/A |
| 60 S | Standard | 25.0m | N/A | N/A | N/A |
| 120 S | Standard | 60.0m | 0.5m/s | 1.0deg | 2.0deg |

3. Mechanical Dimensions and Pin Assignment

3.1 Dimensions

This chapter describes the mechanical dimensions of the module.

Figure2: Mechanical Dimensions (Unit: mm)

3.2 Pin Definition

4PIN Molex connector

Figure3: Pin Assignment

Table: CON Pin Description

| Pin No. | I/O | Description | Remark |
|---------|----------|-------------|--------------------------|
| 1 | RS232_RX | I | RS232 Serial Data input |
| 2 | GND | G | Ground |
| 3 | RE232_TX | O | RS232 Serial Data Output |
| 4 | VCC | I | Module Power Supply |

4. Installation Direction

Please refer to the product arrow label direction in figure 4 for the installation direction. The arrow direction is the forward heading.

Figure4: GRM-5550DR-UB8X4P500 coordinate system

5. Instructions

5.1 Sensor Calibration

Because the chip manufacturing process, each sensor element of GRM-5550DR-UB8X4P500 (three axis gyroscope, three axis accelerometer), sensitivity and zero temperature drift parameters are not the same, in order to make each GRM-5550DR-UB8X4P500 reach the same performance, before leaving the factory, various error compensation has been made for each sensor element of GRM-5550DR-UB8X4P500.

The calibration parameters of sensor components are different for each product, if using the same parameters, it will lead to greater navigation error. This uniqueness can be used to prevent system piracy, therefore improving the reliability of the products.

5.2 Communication interface

The GRM-5550DR-UB8X4P500 system provides two serial ports, where in the serial port 1 is used for transmitting satellite information and receiving differential information, and the serial port 2 is used for receiving the odometer information.

Both serial ports do not provide a hardware handshake, and the use of 8 bit data bits, 0 bit parity bit, 1 bit stop bit (8-N-1) mode, baud rate default is 9600bps, and according to user requirements, it can be modified to 115200bps.

5.3 Communication frequency

The system supports the output of 1HZ and 5HZ data refresh frequency, the default frequency is 1HZ.

5.4 Communication protocol

At present, the GRM-5550DR-UB8X4P500 system outputs common NMEA0183 protocols, such as GPGGA, GPRMC, GPGSV, GPGSA; in addition, in order to output vehicle attitude information, the GRM-5550DR-UB8X4P500 system also defines a set of communication protocols called GPATT.

5.5 Control command

GRM-5550DR-UB8X4P500 system supports users to send control command via serial ports to achieve following functions, but GRM-5550DR-UB8X4P500 cannot save the setting. That means, every time the GRM-5550DR-UB8X4P500 is powered on, it is output by default.

Table 1 : Inertial navigation enabling

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|---------------------------|---------------|--|
| 1 | log gpins | Open inertial navigation | Default | For results, please see protocol GPATT |
| 2 | unlog gpins | Close inertial navigation | | For results, please see protocol GPATT |

Table 2: Output frequency setting

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|---|
| 1 | log ghigh | Achieve 5HZ output | | For results, please see output protocol |
| 2 | unlog ghigh | Achieve 1HZ output | Default | For results, please see output protocol |

Table 3: ATT protocol

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|---|
| 4 | log gpatt | Open GPATT | Default | For results, please see output protocol |
| 8 | unlog gpatt | Close GPATT | | For results, please see output protocol |

Table 4: ZDA protocol

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|---|
| 1 | log gpzda | Open GNZDA | | For results, please see output protocol |
| 2 | unlog gpzda | Close GNZDA | Default | For results, please see output protocol |

Table 5: GSV protocol

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|---|
| 1 | log gpgsv | Open GPGSV, GPGSA | | For results, please see output protocol |
| 2 | unlog gpgsv | Close GPGSV, GPGSA | Default | For results, please see output protocol |

Table 6: BD/GLONS Option

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|--|
| 1 | log gpgbd | Choose GPS+BD | | For results, please see protocol GPATT |
| 2 | unlog gpgbd | Choose GPS+Glonass | Default | For results, please see protocol GPATT |

Table 7: Baud rate setting

| type | attribute | communication protocol | default value | Remarks |
|------|-------------|------------------------|---------------|---|
| 4 | log g4800 | Set as 4800 | | For results, please see output protocol |
| 5 | log g9600 | Set as 9600 | Default 1 | For results, please see output protocol |
| 6 | log g1920 | Set as 19200 | | For results, please see output protocol |
| 7 | log g3840 | Set as 38400 | | For results, please see output protocol |
| 8 | log g115200 | Set as 115200 | Default 2 | For results, please see output protocol |

Remarks:

- (1) All instructions are lowercase letters;
- (2) There is a space key behind Log and unlog;
- (3) GPATT protocol contains a lot of product information, it is recommended that users retain the output of the protocol to facilitate query problems;
- (4) GPGSV, GPGSA take serial port resources, and, it is recommended that users to close two groups of protocols when using the inertial navigation function;
- (5) GRM-5550DR-UB8X4P500 has two default baud rates 9600bps/115200bps. Please specify the baud rate required when make ordering.
- (6) The specific details of required execution time for GRM-5550DR-UB8X4P500 to execute various user commands are shown in following table. If the user sends a command, please make sure that the command is executed.

| No | Command type | required time |
|----|------------------------------|---------------|
| 1 | Inertial navigation enabling | 20ms |
| 2 | Output frequency setting | 20ms |
| 3 | ATT protocol enabling | 20ms |
| 4 | ZDA protocol enabling | 20ms |
| 5 | GSV protocol enabling | 500ms |
| 6 | Choose BD/GLONASS | 500ms |
| 7 | Baud rate setting | 20ms |

6. Attentions

As a high-performance vehicle integrated navigation system, GRM-5550DR-UB8X4P500 system also requires users to pay attention to some matters during application.

| No | Initialization process of integrated navigation | Importance |
|----|---|------------|
| 1 | Before power on, it can be installed roughly according to figure 4, without specific installation Angle requirements. | Required |
| 2 | Before power on, Fixed connected GRM-5550DR-UB8X4P500 and vehicle | Required |
| 3 | After power on, shouldn't move GRM-5550DR-UB8X4P500; | Required |
| 4 | Before the vehicle moves, please make sure the GPS/BD system output the correct protocol | Required |

| No | Initialization process of integrated navigation | Importance |
|----|--|------------|
| 1 | After power on, make static at least 5-10 seconds to complete the attitude initialization of the navigation system; | Required |
| 2 | In the course of the vehicle, it is necessary to keep the GRM-5550DR-UB8X4P500 navigation system moves in an open area for some time, for the algorithm convergence of integrated navigation system, and then test it in complex environments such as tunnels. | |

Further Explain:

In integrated navigation system initialization, it is suggested that the vehicle drive under unobstructed environment for about a few minutes, then go into obstructed environment, the positioning effect will be better.

7. NMEA Data Analysis

The communication statements specified in the NMEA protocol are based on ASCII coding, the data format of the NMEA-0183 protocol statement is as follows: "\$" is the statement start symbol; "," is the domain delimiter; "*" is the checksum identifier, the two digits behind it are checksum, which represent the bitwise XOR value of all characters between (\$) and * (excluding these two characters); "/" is the terminator, all statements must end using it, that is, the ASCII character "return" (hexadecimal 0D) and "line feed" (hexadecimal 0A).

The default output NMEA data of GRM-5550DR-UB8X4P500 is \$GNRMC, \$GNGGA, \$GNZDA,\$GPATT, users can also specify the output data according to personal needs.

7.1 GGA Data Format

For Example : \$GNGGA,062938.00,3110.4700719,N,12123.2657056,E,1,25,0.6,58.9666,M,0.000,M,99,AAAA*50

| No | Name | Description | Code | Example |
|----|----------|--|---------------|---------------|
| 1 | \$GNGGA | Log header | | \$GNGGA |
| 2 | utc | UTC time (H/M/S) | hhmmss.ss | 202134.00 |
| 3 | lat | Latitude: -90~90 degrees | lll.llllll | 3110.4693903 |
| 4 | latdir | Latitude direction: N: North; S: South | a | N |
| 5 | lon | Longitude: -180~180 degrees | yyyyy.yyyyyyy | 12123.2621695 |
| 6 | londir | Longitude direction: E: east; W: west | b | W |
| 7 | QF | Solution State 0: invalid solution; 1: single point positioning solution; 2: pseudo range difference; | q | 4 |
| 8 | sat No. | Satellite Number | n | 14 |
| 9 | hdop | Horizontal DOP value | x.x | 1.0 |

| 13 | Mode ind | Mode indication (only NMEA0183 3 version output, A= self localization, D= difference, E= estimation, N= data invalid) | a | A |
| 14 | *xx | Checksum | *hh | *57 |
| 15 | [CR][LF] | Sentence terminator | | [CR][LF] |

7.3 ATT Data Format

Fro Example: \$GPATT,0.000,p,0.000,r,y,20190621,5,0024004A5113353434303038,ID,1,INS,405,02,00,5,G,A,0,6,00,1,F,1,1,0,0.002,0,1,0,220,11*03

| No | Name | Description | code | Example |
|----|---------------|---------------------------|--------|---------|
| 1 | \$GPATT | Log header | | \$GPATT |
| 2 | Pitch | pitching angle | ddd.mm | 1.34 |
| 3 | Angle Channel | P: pitch, r: roll, y: yaw | P | P |
| 4 | Roll | Roll angle | ddd.mm | 2.56 |

| | | | | |
|----|------------------|---|---------|---|
| 5 | Angle Channel | P: pitch, r: roll, y: yaw | A | R |
| 6 | Yaw | Yaw angle | ddd.mm | 132.45 |
| 7 | Angle Channel | P: pitch, r: roll, y: yaw | | Y |
| 8 | Soft Version | software version number | xxxxxxx | 20161105 |
| 9 | Version Channel | S: software version number | | S |
| 10 | Product ID | 96 bit unique ID | | D226FF343839503157147637 |
| 11 | ID Channel | ID: product ID | ID | ID |
| 12 | INS | Default open inertial navigation | X | 1: open, 0: close |
| 13 | INS Channel | INS: whether inertial navigation open | INS | INS |
| 14 | Hardware version | Named after the master chip | 411 | |
| 15 | State_Flag | Algorithm status flag | d | Please refer to table A below for details |
| 16 | Mis_Angel_Num | number of Installation Angle identification | d | 9 |
| 17 | IMU_Kind | Coordinate system number | d | 5: forward, 7: backward |
| 18 | Beidou flag | Choose GPS+BD/GPS+Glonass | B | B:GPS+BD,G:GPS+Glonass |

Remarks 1: The Bit 17 in GPATT protocol is the coordinate system number of the sensor, If shown 5, the Gmosue direction should be forward, and if shown 7, the Gmouse direction should be backward. It is recommended to read this flag bit and display it on the controller screen, so that the user can know whether the current installation mode is consistent with the sensor coordinate system setting.

Table A: Physical meaning description of State_Flags

| Flag | description | Required conditions |
|------|--|-------------------------|
| 0 | Prepare initialization | System power on |
| 1 | Attitude initialization completed | Vehicle still for 5-10S |
| 2 | Position speed initialization completed | Speed exceeding 2m/s |
| 3 | Direction angle initialization completed | Speed exceeding 5m/s |

Remarks 2: the conditions for inertial navigation to work normally:

- (1)GPATT protocol 12 field INS is 1
- (2)GPATT protocol 15 field State Flag is 03

7.4 GSA Data Format

For Example: \$GNGSA,A,3,07,08,09,11,01,23,27,,,,,3.01,1.25,2.74*1A

| No | Name | Description | code | Example |
|----|------------------|----------------------------------|------|---|
| 1 | \$GNGSA | Log header | | \$GNGSA |
| 2 | Positioning mode | Positioning mode flag | | Please refer to table B below for details |
| 3 | Positioning type | Positioning type flag | | Please refer to table C below for details |
| 4 | Satellite used | First channel | SV | 07 |
| 5 | Satellite used | Second channel | SV | 08 |
| 6 | ... | ... | ... | ... |
| 7 | PDOP | Position Dilution Of Precision | | 3.01 |
| 8 | HDOP | Horizontal Dilution of Precision | | 1.25 |
| 9 | VDOP | Vertical Dilution of Precision | | 2.74 |
| 10 | *xx | Checksum | *hh | *1A |
| 11 | [CR][LF] | End of message termination | | [CR][LF] |

Table B: Physical meaning description of State_Flags

| Flag | description |
|------|---|
| M | Manual-forced to operate in 2D or 3D mode |
| A | Auto switch 2D/3D mode |

Table C: Physical meaning description of State_Flags

| Flag | description |
|------|----------------|
| 1 | No positioning |
| 2 | 2D positioning |
| 3 | 3D positioning |

7.5 GSV Data Format

For Example : \$GPGSV,4,2,13,09,36,259,48,11,51,187,45,16,,,33,22,02,168,40*46

| No | Name | Description | code | Example |
|----|-------------------|--------------------------|------|---------|
| 1 | \$GPGSV | Log header | | \$GPGSV |
| 2 | Number of Message | Number of GSV statements | | 4 |

| | | | | |
|----|--------------------|-------------------------------------|---------|----------|
| 3 | Message Number | Number of GSV statements digits | | 2 |
| 4 | Satellites in View | Active satellites | | 13 |
| 5 | Satellite ID | Pseudo random noise code(01-32) | | 09 |
| 6 | Elevation | Satellite elevation (00-90 degrees) | degrees | 36 |
| 7 | Azinmuth | Satellite azimuth (00-359 degrees) | degrees | 259 |
| 8 | SNR(C/NO) | Signal to noise ratio (00-99) dbHz | dbHz | 48 |
| 9 | ... | ... | ... | ... |
| 10 | Satellite ID | Pseudo random noise code(01-32) | | 22 |
| 11 | Elevation | Satellite elevation (00-90 degrees) | degrees | 02 |
| 12 | Azinmuth | Satellite azimuth (00-359 degrees) | degrees | 168 |
| 13 | SNR(C/NO) | Signal to noise ratio (00-99) dbHz | dbHz | 40 |
| 14 | *xx | Checksum | *hh | *46 |
| 15 | [CR][LF] | Sentence terminator | | [CR][LF] |

7.6 GLL Data Format

For Example : \$GNGLL,2240.69163,N,11402.71942,E,051756.00,A,A*77

| No | Name | Description | code | Example |
|----|---------------|----------------------------------|----------------|-------------|
| 1 | \$GNGLL | Log header | | \$GNGLL |
| 2 | Latitude | Latitude | ddmm.mmm mm | 2240.69163 |
| 3 | N/S Indicator | Latitude N (north) or S (south) | | N |
| 4 | Longitude | Longitude | ddmm.mmm mm | 11402.71942 |
| 5 | E/WIndicator | Longitude E (east) or W (west) | | E |
| 6 | UTC Position | UTC time | hhmmss.sss | 051756.00 |
| 7 | Status | A=data valid or V=data not valid | | A |
| 8 | *xx | Checksum | *hh | *77 |
| 9 | [CR][LF] | Sentence terminator | | [CR][LF] |

7.7 VTG Data Format

For Example: \$GNVTG,309.62, T,227.10,M, 0.13, N, 0.2, K*6E

| No | Name | Description | code | Example |
|----|---------|-------------|------|---------|
| 1 | \$GNVTG | Log header | | \$GNVTG |

| | | | | |
|----|------------------|------------------------------------|---------|----------|
| 2 | Measured heading | Movement angle (000 - 359 degrees) | Degrees | 309.62 |
| 3 | Reference | Due north reference system | | T |
| 4 | Measured heading | Movement angle (000 - 359 degrees) | Degrees | 227.10 |
| 5 | Reference | Magnetic north reference system | | M |
| 6 | Speed | Horizontal velocity | Knots | 0.13 |
| 7 | Units | unit | Section | N |
| 8 | Speed | | Km/h | 0.2 |
| 9 | Units | unit | Km/h | K |
| 10 | *xx | Checksum | *hh | *6E |
| 11 | [CR][LF] | Sentence terminator | | [CR][LF] |

7.8 VTG Data Format

For Example: \$GNVTG,309.62,T,227.10,M,0.13,N,0.2,K*6E

| No | Name | Description | code | Example |
|----|------------------|------------------------------------|---------|----------|
| 1 | \$GNVTG | Log header | | \$GNVTG |
| 2 | Measured heading | Movement angle (000 - 359 degrees) | Degrees | 309.62 |
| 3 | Reference | Due north reference system | | T |
| 4 | Measured heading | Movement angle (000 - 359 degrees) | Degrees | 227.10 |
| 5 | Reference | Magnetic north reference system | | M |
| 6 | Speed | Horizontal velocity | Knots | 0.13 |
| 7 | Units | unit | Section | N |
| 8 | Speed | | Km/h | 0.2 |
| 9 | Units | unit | Km/h | K |
| 10 | *xx | Checksum | *hh | *6E |
| 11 | [CR][LF] | Sentence terminator | | [CR][LF] |
